johannehesse@gmail.com | 914-643-7435 | New Rochelle, NY | johannehesse.dev | linkedin.com/in/johanne-hesse-ab965521a

PROFESSIONAL SUMMARY

Cybersecurity student with hands-on experience in Linux administration, network traffic analysis, firewall configuration, and self-hosted lab management, including building and maintaining a Proxmox home lab. Seeking a cybersecurity internship in security operations, network security, or security support.

EDUCATION

B.S. Cybersecurity (Cyber Defense Concentration), *University at Albany, SUNY*

09/2024 – 05/2028 | Albany, NY

GPA 3.85

Dean's List (Spring 2025, Fall 2025)

Relevant Coursework: Technical Foundations of Cybersecurity, Programming Essentials for Cyber, Information Security Assurance, Database Fundamentals for Security

TECHNICAL SKILLS

Security / Networking: Wireshark, pfSense, Pi-hole, AdGuard, Proxmox, Docker, Firewalls, NAT, TCP/IP, DNS, Network Troubleshooting, Traffic Analysis

Operating Systems: Linux, Windows, macOS

Languages / Scripting: Python, Java, JavaScript, C++

Web / Development: React, TypeScript, HTML/CSS, Tailwind CSS

PROJECTS

Home Lab

- Built and maintained a Proxmox-based home lab/private cloud to host isolated environments for networking and security practice
- Deployed containerized services with Docker to support self-hosting and repeatable testing
- Configured Pi-hole for DNS-level filtering and visibility into network queries and client activity
- Used Wireshark to capture and analyze traffic (DNS/TCP/HTTP) to troubleshoot connectivity and validate network behavior
- Performed network troubleshooting across lab services and clients (IP/DNS/routing), documenting fixes and configurations
- Configured pfSense firewall rules and NAT to restrict traffic and validate access controls between lab networks

Personal Website – johannehesse.dev

- Built and deployed a responsive personal site to showcase projects and skills
- Integrated a functional contact form with validation and email delivery
- Implemented UI components and routing to improve site usability and structure
- Set up an Express.js server for routing and static content delivery

Weather App - Python

- Developed a Python-based application that fetched real-time weather data using an API
- Implemented data handling and API requests, building a functional tool to display weather conditions
- Gained experience with programming logic, debugging, and implementing clean code

EMPLOYMENT HISTORY

Commercial Driver, *AutoZone*

08/2025 – Present | New Rochelle, NY

- Delivered 20–30 customer orders per shift with consistent on-time performance
- Verified and processed over 100 product orders weekly, improving speed and accuracy
- Resolved inventory issues in collaboration with 5–7 person team

Remote Customer Service Representative, *U-Haul*

03/2022 – 08/2022 | New Rochelle, NY

- Handled 40–60+ inbound support calls daily, resolving user issues in real time
- Navigated complex service requests using internal CRM systems
- Completed 40+ hours of remote training in customer support and technical documentation

CERTIFICATES

CompTIA Security+ (In Progress)

Virtual Experience Programs (Forage)

- Mastercard Cybersecurity (Oct 2024); EA Software Engineering (Oct 2024)

ORGANIZATIONS

Cyber Defense Organization, *Member*

09/2025 – Present | Albany, NY

- Participate in cybersecurity training, competitions (e.g., CCDC), and career development events
- Collaborate on team activities focused on network defense and basic threat detection concepts
- Contribute to GitHub-based content and coordinate with members via Discord
